

Mobiteam Payment Solutions

Money doesn't grow on trees. Your client knows it.
So do You.

You both want to keep money working –
now Mobiteam has the best solution for Your business.

Providing solutions based on mobile technologies make payments the fastest ever. Now selling and purchasing products and services is adapted to the needs of today's users.

Mobiteam offers solutions using various latest technologies enabling global payments.

Interactive Voice Response

The IVR system plays pre-recorded voice prompts to which the person presses a number on a telephone keypad to select the option chosen, or speaks simple answers in response to the voice prompts.

IVR systems can be used to create and manage many services including telephone banking, order placement, caller identification and routing, balance inquiry and airline ticket booking.

Mobiteam's infrastructure allows for charging 120 analog or digital calls simultaneously, charging over wappush or dropcharge (customer's telephone bill).

Premium Rate SMS / MMS – SMS/MMS

An ideal medium for sales and distribution of high-value content like ringtones, video clips, pictures, and integrated content including text, sound and images, premium text, or a link to a ringtone, wallpaper, logo, video clip, game, etc.

Billing content directly via the transporting medium, SMS/MMS offers a great advantage and is the most accepted payment method among mobile phone users.

Premium SMS/MMS offers an effective and highly profitable distribution channel for Your content!

WEB billing

A useful support tool for Premium Rate SMS-MMS. The solution offers a simple and flexible way of charging users for products, services and contents purchased on the web. Such payment can be processed without any additional registration or providing any personal data by the user.

Direct communication straight from the website and an opportunity to generate two types of PINs – time-based or one-time – to allow the user for downloading content makes a web billing solution a flexible way to charge the users.

Unlike with Premium Rate SMS, an advantage for our Client is no need to share the revenues with mobile carriers for Premium Rate SMS, as well as more flexibility in pricing strategies.
