

# MobiChat

**MobiChat** extends chatting possibilities for Mobile users! Unlike standard SMS chats, where users can interact with each other via text messages, **MobiChat** – based on MIDlet technology – adds streaming, chat history and customized profile selection!

## What is MobiChat?

Our unique chat service combines all necessary tools into one powerful application. Streaming based, highly configurable and easy to use! A state-of-the-art service designed for mobile businesses. The **MobiChat** is centered on simplicity; simplicity for the business and simplicity for the customers (chat, payment, usability).

This type of interaction is one of the first of its kind in the world. **MobiChat** allows for 1 to 1 interaction thanks to the convenience of UMTS/GPRS mobile device. Create a space, where users can chat in real time. Set up a range of chat profiles where users can find everything they need.

Start making  
money today with  
our new mobile  
solutions!

## Why streaming?

Streaming media technology enables a real-time on demand distribution of audio, video and multimedia on the Internet. Continuous transfer of digital media (video, voice and data) allows receiving a real-time stream. Streamed data is transmitted by a server application and received and displayed in real-time by client applications. These applications can start displaying video or playing back audio as soon as enough data has been received and stored in the receiving station's buffer.

Unlike with traditional SMS-chat services, **MobiChat** offers time-based or data-based charging methods which allow flexible billing suitable for complex stream-based services.

Don't miss out on this great opportunity to get into the market of the future and enter this great new business sector before the competition takes it over. With an international network, innovative streaming and high quality, **MobiChat** provides the best rates for UMT/GPRS chatting.

## Why MobiChat?

- because it is a fully managed and branded service
- because it is based on stream and runs automatically as a convenience to users
- because it is a safe and efficient chat system
- because it multiplies chat potential
- because it is new, innovative and different from other solutions
